Aman Patel

FORWARD-DEPLOYED AI ENGINEER

Toronto, ON, Canada · TN-Visa Eligible (US Work Authorized) · (416) 828-2451 · pateljaman@outlook.com · linkedin.com/in/amanjpatel · amanpatel.vercel.app · github.com/aman9824

SUMMARY

Customer-embedded software engineer with 4 years shipping production systems for Fortune-50 enterprises — currently embedded with a Fortune-50 automotive manufacturer, building multi-agent GenAI on Claude (Claude Agent SDK, Claude Code, Vertex AI) that automates large-scale legacy mainframe modernization (~40% manual-effort reduction); previously embedded with a Fortune-50 US telecom carrier at Amdocs. Production LLM experience across agent development, RAG, prompt engineering, tool use, and evaluation; deep Python + Java/TypeScript on AWS, GCP, and OpenShift. TN-visa eligible and open to US relocation.

CORE SKILLS

AI / LLM Engineering: Anthropic Claude (Claude Agent SDK, Claude Code, Vertex AI + API), multi-agent systems (LangGraph, CrewAI, Google ADK), MCP servers, sub-agents & agent skills, RAG, prompt engineering, tool use, prompt caching, evaluation frameworks, LangChain, Gemini

Languages: Python, Java, TypeScript, JavaScript, SQL

Cloud & DevOps: AWS (Bedrock, EC2, S3, IAM), Google Cloud (Vertex AI), OpenShift, Docker, Kubernetes, CI/CD

Backend & Data: Spring Boot, FastAPI, Node.js, microservices, Apache Kafka, REST APIs; PostgreSQL, Oracle, Elasticsearch, Redis

Enterprise Domains: Automotive, Telecommunications, Fintech

EXPERIENCE

Software Engineer — GenAI (Contract)

Jan 2025 – Present

Cascade Cloud Tech · *Toronto, ON (Remote)*

Customer: a Fortune-50 automotive manufacturer — legacy-system modernization program

- Architected a multi-agent system on Claude (Claude Agent SDK, LangGraph, with Google ADK) plus structured retrieval (RAG via LangChain, Vertex AI) that automates large-scale legacy mainframe modernization — cutting targeted manual effort ~40%.
- Ran discovery directly with the customer's engineering teams; translated business and system requirements into shippable architecture.
- Built and operate the production deployment on Vertex AI + OpenShift across Claude and Gemini models — model invocation, retrieval, error handling, observability, and cost telemetry.

Software Developer (Freelance)

May 2024 – Dec 2024

16597629 Canada Inc. · *Toronto, ON*

- Delivered cloud-native backend services in Java 17, Spring Boot, Spring Security, and Hibernate on OpenShift + GCP for an enterprise modernization program.
- Designed microservices for modularity and high availability using pub/sub patterns; integrated Splunk + Dynatrace for logging and performance monitoring.
- Owned applications end-to-end, from design through deployment and ongoing support.

Software Developer

Jan 2022 – Apr 2024

Amdocs · *Mississauga, ON*

Customer: a Fortune-50 US telecom carrier

- Customer-embedded engineer partnering directly with the carrier's teams on discovery, technical specs, and production delivery.
- Built resilient React micro-frontends backed by Node.js / Spring Boot microservices on AWS + OpenShift.

- Reduced production downtime ~30% and cut incident-resolution time ~20% through hands-on triage and clear stakeholder communication.

Quality Automation Engineer Jul 2021 – Jan 2022

Equifax · *Toronto, ON*

Credit-risk scoring platform (fintech)

- Built Selenium + JUnit automation integrated into CI/CD/CT pipelines, lifting defect-detection ~15% and cutting test-cycle time ~20%.
- Implemented functional and non-functional automation (performance, reliability, security).

Software Developer Intern Jan 2021 – Jun 2021

The Graduate Network · *Toronto, ON*

- Built full-stack web-application features as clean, testable code; collaborated with senior developers on code reviews, testing, and debugging (IntelliJ, Kibana).

Microsoft Learn Student Ambassador Jan 2021 – May 2021

Microsoft · *Ontario, Canada*

- Selected as 1 of ~40 Canadian ambassadors from thousands of global applicants; ran Azure enablement sessions, gathered requirements, and trained university peers.

SELECTED PROJECTS (OPEN SOURCE)

Finance — AI Filings Analyst. Multi-agent Claude system that ingests 10-K/10-Q & earnings reports and extracts KPIs + risk signals with span-level citations; RAG-grounded and eval-gated. (building)

Real Estate — Investment Analyzer. Agentic analyzer turning listings + comparables into investment memos (cap rate, cash-on-cash, IRR) with cited assumptions; the same Claude stack applied to a second vertical. (building)

FactorForge — Auditable Quant-Research Engine (capstone). Turns quant-finance research into an evidence-linked knowledge graph via vectorless retrieval (no embeddings; every fact cited); a Claude multi-agent pipeline researches + backtests factor strategies with an overfitting critic. MCP-served, eval-gated. Research/educational. (building)

CERTIFICATIONS & CONTINUOUS LEARNING

AWS Certified Cloud Practitioner · Anthropic Academy (in progress): Building with the Claude API, MCP (intro + advanced), Sub-agents, Agent Skills, Claude Code, Vertex AI, Bedrock

EDUCATION

York University · B.S. in Computer Science 2019 – 2021

Toronto, ON
